DETAILED ACTION

Response to Amendment

The amendment submitted on Mar 5, 2009 was reviewed and considered with the following results:

The cancellation of claims 4 and 7-10 rendered their respective objection(s), and/or rejection(s), moot.

Amended claim 1 overcame the prior art rejections described on pages 3 and 6-7 of the previous Office Action. Therefore, the following rejections have been withdrawn: 1) claims 1 and 5-6 under 35 U.S.C. 102(b), with respect to Brox et al.; 2) claim 2 under 35 U.S.C. 103(a), with respect to Brox et al./Tanaka et al.; and 3) claim 3 under 35 U.S.C. 103(a), with respect to Brox et al./Tokai. None of these references clearly shows or discloses the switch circuit and capacitor as now cited within claim 1.

Therefore, there is no known objection or rejection remaining within the present application.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

None of the references reviewed and considered shows a substrate voltage generating circuit as cited within independent claim 1 with its level shift circuit, switch circuit, capacitor, and first-third potentials. More specifically, none of the references clearly shows or discloses a switch circuit comprising a switching element with its control electrode receiving the output signal (having the first and third potential levels) provided by the level shift circuit, a first electrode connected to the second power supply node, and a second electrode connected to the

output node; and a capacitor coupled between the first electrode and the control electrode of the switching element as cited within claim 1, upon which claims 2-3 and 5-6 depend. The potential levels, nodes, and terminals include the output node having the third potential level that is lower than the second potential level supplied by the second power supply node. [Note: Referring to Fig. 1 of the applicants, and page 6 of the applicants' Appeal Brief, the third potential level at output node OUT_vbb is the substrate voltage VBB, which one of ordinary skill in the art understands is less than (e.g. negative with respect to) second potential level VSS. Also, page 6 of the Decision on Appeal (mailed on Sep 3, 2008) cites "the potential at output terminal OUT.vbb will always be less than the potential at VSS, by that nonzero amount. The output node will therefore be at a third potential level (VBB), which is lower than the second potential level (VSS), just as Appellants claim."]

Claims 1-3 and 5-6 are allowed, and have been renumbered as 1-5, respectively for printing purposes. The renumbering takes into account the cancellation of claims 4 and 7-10.

Any comments considered necessary by the applicants must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
